

Opportunity to Showcase your EUVL Research, Products, and Services!

Vivek Bakshi, EUV Litho, Inc.

March 21, 2022

Do you have products or services for the EUVL industry? What about R&D with new, or updated results? If so, don't miss the Friday deadline for the opportunity to share what you have to offer to the growing EUVL Industry with your colleagues and community.

The submission deadline, this Friday, March 25th, for oral presentations and inclusion in the 2022 EUVL Workshop & Supplier Showcase is just around the corner.

What's new and different this year?

As EUVL continues its successful implementation into FABs, the focus is now on EUVL infrastructure – mask, resists, metrology, and host of other products and services.

However, sometimes it isn't easy to break through and get in front of your potential customers: chip makers, OEMs or their suppliers, and other industry experts. To address this particular challenge, we have created a unique opportunity for suppliers and non-profit organizations to showcase their products and services to the EUVL community through oral presentations. These presentations then remain available on our website for download, leaving room for continued discovery of Supplier offerings by industry leaders, experts, and researchers.

The [EUVLitho.com](http://www.euvlitho.com) website remains a top site for EUVL related information, as evidenced by the 150K unique visitors over the last several years and millions of hits from people looking for EUVL related research and content. We have open-access presentations ranging from 2008 on and are known to be the only site available to host the amount of open-access EUVL related data that is both made easily available to the community and routinely sought out by industry experts and customers. Having your presentation available on EUVLitho.com will open additional opportunities for you to connect with the people who are in search of products like yours.

EUV Litho Inc. workshops are routinely attended by key stakeholders in the EUVL industry, and the size of our meetings has more than doubled since moving to an online format! Attendee feedback has shown that most people prefer an online format for its convenience and the availability of recorded sessions that allow for later viewing if they weren't able to attend live—a perk of meeting online that you don't necessarily get from in-person sessions. Q&A sessions occur after every presentation and have been very lively. We have also found that the conversion of poster sessions to speed presentations has been very successful. Poster papers are also published early on the website to allow attendees to review them at their leisure prior to the meeting.

Overall, the online format and gathering of the EUVL community to share the latest in R&D, EUVL products, and services has continued to be a success. You do not want to miss out on the chance to showcase your work, products, and/or services with your colleagues and customers! The Abstract Submission Deadline is March 25th, and information on how to submit is available on our website at <http://www.euvlitho.com/>.
